Vector Translucency New in MapInfo Pro v9.5.1

with v9.5 or older   **New with v9.5.1**

Check out this HOT new feature in MI Professional v9.5.1

MIP v9.5.1 offers enhanced rendering that allows you to create translucent labels, themes, and layers, as well as apply anti-aliasing to smooth the jagged edges of text, labels, lines, curves, region borders and raster images. This feature provides new and exciting ways to display information that was not possible before.
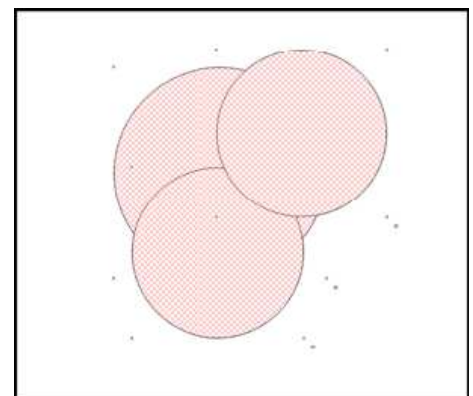

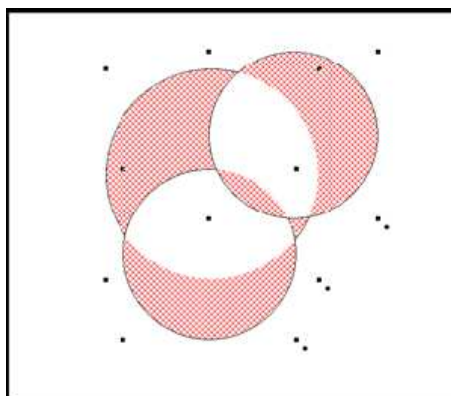

Enhanced rendering makes labels, lines, borders and raster imagery cleaner and crisper in the map and layout windows as well as when printed.

If you don't have this exciting new version, please give TSI a call at 866-874-6277 for more information!

AnySite

AnySite is an essential decision support tool for leaders in retail, restaurant, real estate and financial services. It is designed specifically to provide analysts and marketers with insight into their location, customer and market research — from the desktop to the enterprise. AnySite is based on an open architecture that enables you to integrate the specific content you need from the sources you prefer.

With AnySite, you can connect, retrieve, report and map any information from your proprietary database to analyze trade area data quickly, easily and accurately.

Call us for a sample report.
